

Thromboembolic complications in users of estradiolvalerate/dienogest oral contraceptives

Øjvind Lidegaard

**First global conference in contraception,
reproductive and sexual health
Copenhagen, May 24, 2013**

**Department of Gynaecology, Rigshospitalet
University of Copenhagen**

Hormonal contraception: History

1960: First combined pill on the market, 1st gen.

1970's: 2nd gen. OC with levonorgestrel with middle dose of ethinylestradiol (EE)

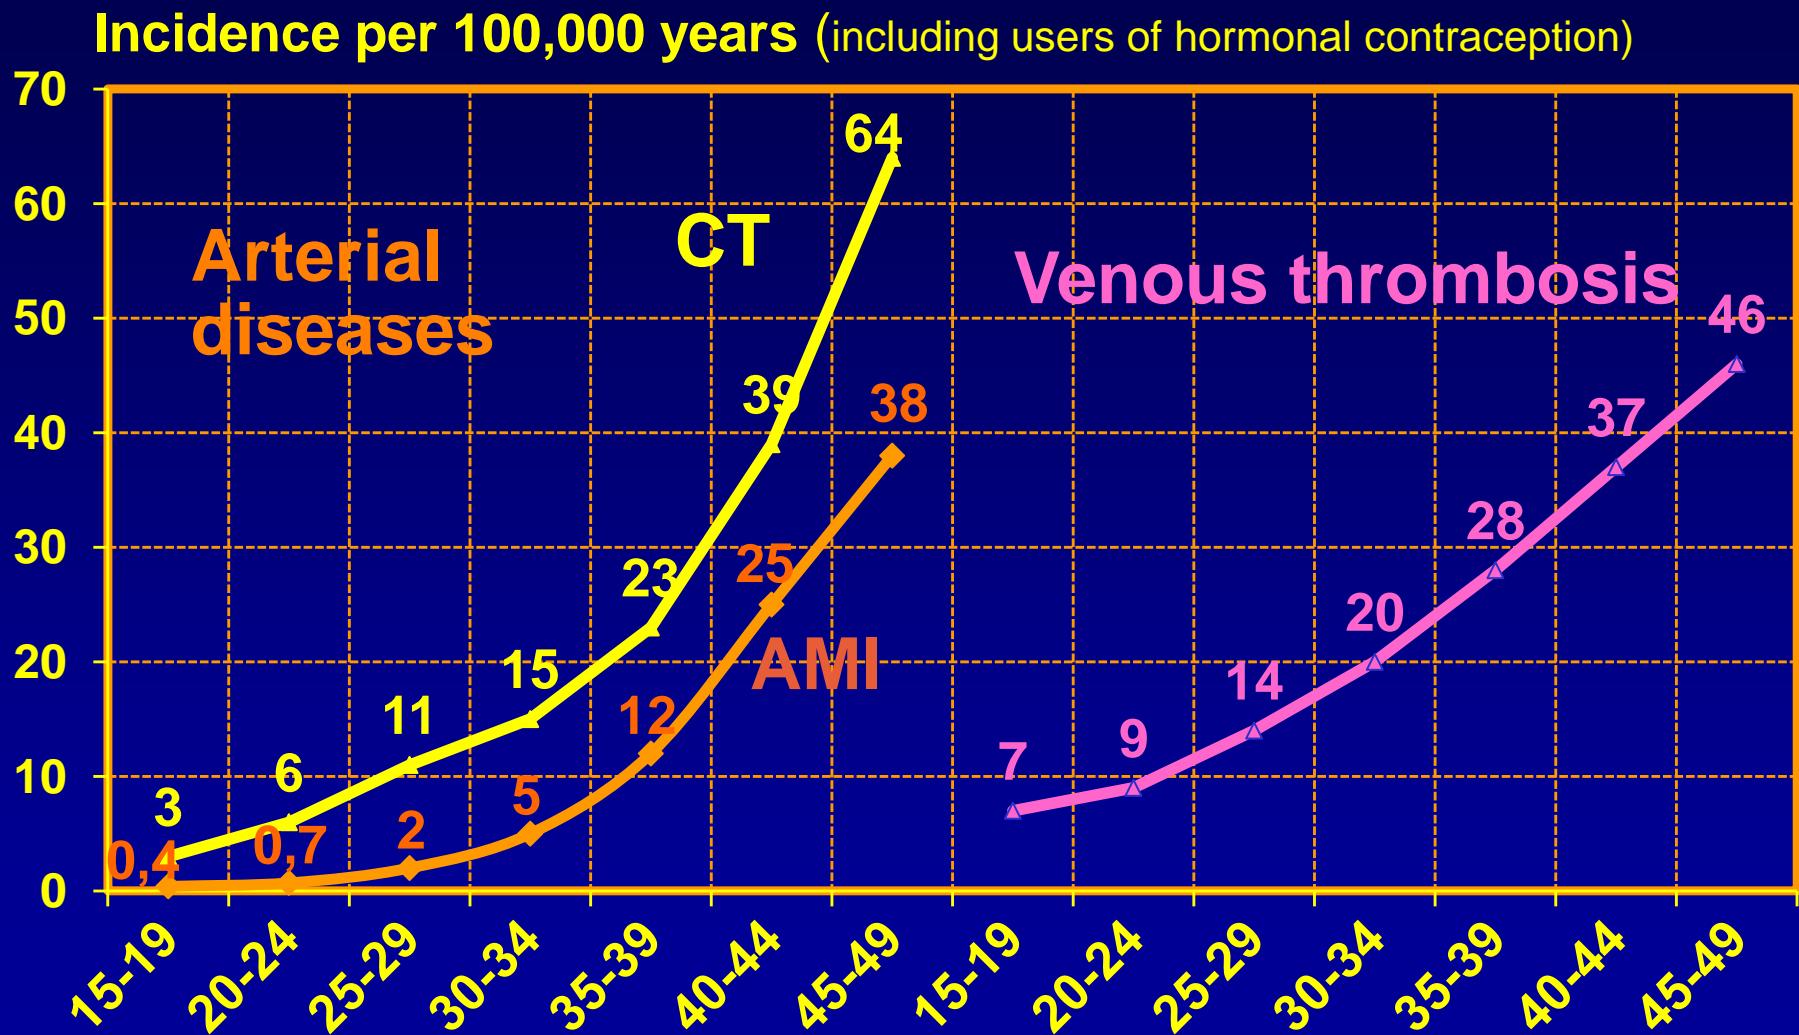

1980's: 3rd gen. OC (desogestrel or gestodene)

1990's: 20 ug EE OC, levonorgestrel-IUS

2000's: 4th gen. OC (drospirenone), implant, vaginal ring, natural oestrogen OC

CT, AMI and VT in DK 2001-2009

Pregnant and puerperal women excluded

Qlaira & venous thrombosis: Methods

National Health Registry (>1977)

VT diagnoses,
Previous CaVD/canc.
Pregnancies, surgery

Registry of Medicinal products (>1995):

OC use (>1995)

Anticoagulation therapy
BP↑, DM, Hyperchol.

Cause of Deaths Registry (>1977)

Lethal VT

Statistics Denmark

PIN-codes, education
vital status, emigration

E2V/dienogest: Conclusion

- The risk of venous thrombosis was significantly increased with RR of 4.7, just in between 2nd and 3rd/4th generation COC.
 - The risk of AMI and thrombotic stroke was not increased, and with RR estimates below the RR of 2nd generation COC.
-

E2V/dienogest and venous thrombosis
